| 14 | Serial No. | Serial number(00~99) | | |

2.General Specification

| Item | Dimension | Unit |
|------------------|--------------------------|------|
| Dot Matrix | 128 x 32 Dots | — |
| Module dimension | 66.5 × 35.0 × 9 Max. | mm |
| Active Area | 55.016 × 13.096 | mm |
| Pixel Size | 0.406 × 0.386 | mm |
| Pixel Pitch | 0.43 × 0.41 | mm |
| Display Mode | Passive Matrix | |
| Display Color | White | |
| Drive Duty | 1/32 Duty | |
| IC | SH1106 | |
| Interface | 6800,8080,4-Wire SPI,I2C | |
| Size | 2.23 inch | |

3.1 Application recommendations

Recommended components :

C1 : 4.7uF

Note:

(1).The capacitor value is recommended value. Select appropriate value against module application.

4.Interface Pin Function

| No. | Symbol | Function | | | | | | | | | | | | | | | |
|------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------------|---------------|--------|-----|-----|---|---|---|---|-----|---|---|---|---|
| 1 | VSS | Ground. | | | | | | | | | | | | | | | |
| 2 | VDD | Power supply input. | | | | | | | | | | | | | | | |
| 3 | NC | No connection. | | | | | | | | | | | | | | | |
| 4 | D/C# | This is the Data/Command control pad that determines whether the data bits are data or a command. D/C = "H": the inputs at DB0 to DB7 are treated as display data. D/C = "L": the inputs at DB0 to DB7 are transferred to the command registers. In I2C interface, this pad serves as SA0 to distinguish the different address of OLED driver. | | | | | | | | | | | | | | | |
| 5 | R/W# | This is a MPU interface input pad. When connected to an 8080 MPU, this is active LOW. This pad connects to the 8080 MPU WR signal. The signals on the data bus are latched at the rising edge of the WR signal. When connected to a 6800 Series MPU: This is the read/write control signal input terminal. When R/W = "H": Read. When R/W = "L": Write. | | | | | | | | | | | | | | | |
| 6 | E/RD# | This is a MPU interface input pad. When connected to an 8080 series MPU, it is active LOW. This pad is connected to the RD signal of the 8080 series MPU, and the data bus is in an output status when this signal is "L". When connected to a 6800 series MPU, this is active HIGH. This is used as an enable clock input of the 6800 series MPU. When RD = "H": Enable. When RD = "L": Disable. | | | | | | | | | | | | | | | |
| 7~14 | DB0~DB7 | This is an 8-bit bi-directional data bus that connects to an 8-bit or 16-bit standard MPU data bus. When the serial interface is selected, then D0 serves as the serial clock input pad (SCL) and D1 serves as the serial data input pad (SI). At this time, D2 to D7 are set to high impedance. When the I2C interface is selected, then D0 serves as the serial clock input pad (SCL) and D1 serves as the serial data input pad (SDAI). At this time, D2 to D7 are set to high impedance. | | | | | | | | | | | | | | | |
| 15 | CS# | This pad is the chip select input. When CS = "L", then the chip select becomes active, and data/command I/O is enabled. | | | | | | | | | | | | | | | |
| 16 | RES# | This is a reset signal input pad. When RES is set to "L", the settings are initialized. The reset operation is performed by the RES signal level. | | | | | | | | | | | | | | | |
| 17 | BS1 | These are the MPU interface mode select pads. | | | | | | | | | | | | | | | |
| 18 | BS2 | <table border="1"> <thead> <tr> <th></th> <th>68XX-parallel</th> <th>80XX-parallel</th> <th>Serial</th> <th>I2C</th> </tr> </thead> <tbody> <tr> <td>BS1</td> <td>0</td> <td>1</td> <td>0</td> <td>1</td> </tr> <tr> <td>BS2</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> </tr> </tbody> </table> | | 68XX-parallel | 80XX-parallel | Serial | I2C | BS1 | 0 | 1 | 0 | 1 | BS2 | 1 | 1 | 0 | 0 |
| | 68XX-parallel | 80XX-parallel | Serial | I2C | | | | | | | | | | | | | |
| BS1 | 0 | 1 | 0 | 1 | | | | | | | | | | | | | |
| BS2 | 1 | 1 | 0 | 0 | | | | | | | | | | | | | |

| | | |
|-------|-----|----------------|
| 19 | NC | No connection. |
| 20 | FG | Ground. |
| 21~25 | NC | No connection. |
| 26 | VSS | Ground. |
| 27~28 | NC | No connection. |

5. Absolute Maximum Ratings

| Parameter | Symbol | Min | Max | Unit | Notes |
|--------------------------|---------|------|-----|------|-------|
| Supply Voltage For Logic | VDD-VSS | -0.3 | 3.6 | V | 1,2 |
| Operating Temperature | TOP | -40 | +80 | °C | — |
| Storage Temperature | TSTG | -40 | +85 | °C | — |

Note :

1. All the above voltages are on the basis of “VSS = 0V”.
2. When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6. “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.
3. The absolute limit temperature was verified according to the test conditions of reliability test (See section 9. Reliability) , and module was met all criteria.
4. The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80 °C.

6. Electrical Characteristics

6.1 DC Electrical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|--------------------------|--------|-----------|---------|-----|---------|------|
| Supply Voltage for Logic | VDD | — | 2.9 | 3.3 | 3.5 | V |
| Input High Volt. | VIH | — | 0.8XVDD | — | VDD | V |
| Input Low Volt. | VIL | — | VSS | — | 0.2xVDD | V |
| Output High Volt. | VOH | — | 0.8xVDD | — | VDD | V |
| Output Low Volt. | VOL | — | VSS | — | 0.2xVDD | V |
| Display 50% Pixel On | IDD | VDD=3.3V | — | 75 | 110 | mA |

6.2 Initial code

```
void INIT_SH1106(){
    WriteCommand(0xAE);    //display off

    WriteCommand(0xB0);    //set page address
    WriteCommand(0x10);    //set higher column address
    WriteCommand(0x04);    //set lower column address

    WriteCommand(0xA4);    //set entire display off

    WriteCommand(0xD5);    //set display clock divide ratio/oscillator frequency
    WriteCommand(0x50);

    WriteCommand(0xA8);    //set multiplex ration
    WriteCommand(0x1F);

    WriteCommand(0xD3);    //set display offset
    WriteCommand(0x00);

    WriteCommand(0x40);    //set display start line

    WriteCommand(0xAD);    //set DC-DC
    WriteCommand(0x8A);

    WriteCommand(0xA1);    //set segment re-map

    WriteCommand(0xC8);    //set common output scan direction

    WriteCommand(0xDA);    //set common pads hardware configuration
    WriteCommand(0x12);

    WriteCommand(0x81);    //set contrast control register
    WriteCommand(0x6F);

    WriteCommand(0xD9);    //set dis-charge/pre-charge period
    WriteCommand(0x11);

    WriteCommand(0xDB);    //set VCOM deselect level
    WriteCommand(0x35);

    WriteCommand(0xA6);    //set normal display

    WriteCommand(0xAF);    //display on
}
```

Note 1: Initial code is for reference only. Please make the best adjustment with the OLED module.

Note 2: Command: Set Contrast Control (0x81), This command sets the Contrast Setting of the display. The chip has 256 contrast steps from 00h to FFh. The segment output current increases as the contrast step value increases. The segment current increases, the OLED brightness increases.

I2C-bus data format

Figure 7 I²C Protocol

Note1:

1. C₀ = "0" : The last control byte , only data bytes to follow,
C₀ = "1" : Next two bytes are a data byte and another control byte;
2. D/C = "0" : The data byte is for command operation,
D/C = "1" : The data byte is for RAM operation.
3. SA0 = Slave address bit

I2C address bit (SA0)

The slave address is following the start condition for recognition use. The slave address is either "b0111100" or "b0111101" by changing the SA0 to LOW or HIGH (A0 pin acts as SA0).

7. Optical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|-------------------------------------------|--------------|-----------|----------|------|------|-------------------|
| View Angle | (V) θ | — | 160 | — | — | deg |
| | (H) ϕ | — | 160 | — | — | deg |
| Contrast Ratio | CR | Dark | 10,000:1 | — | — | — |
| Response Time | T rise | — | — | 10 | — | μ s |
| | T fall | — | — | 10 | — | μ s |
| Display with 100% checkerboard Brightness | | | 100 | 120 | — | cd/m ² |
| CIEx(White) | | (CIE1931) | 0.26 | 0.28 | 0.30 | — |
| CIEy(White) | | (CIE1931) | 0.30 | 0.32 | 0.34 | — |

8.OLED Lifetime

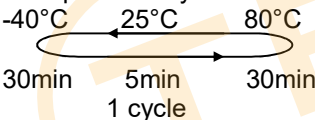

| ITEM | Conditions | Min | Typ | Remark |
|---------------------|--------------------------------------------------------------------------|------------|-----|--------|
| Operating Life Time | Ta=25°C / Initial 50% checkerboard brightness 100cd/m ² | 20,000 Hrs | — | Note |

Note:

1. Lifetime is defined the amount of time when the luminance has decayed to <50% of the minimal brightness.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.
4. Lifetime is not guaranteed one but expected lifetime in normal condition.

9. Reliability

Content of Reliability Test

| Environmental Test | | | |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------|
| Test Item | Content of Test | Test Condition | Applicable Standard |
| High Temperature storage | Endurance test applying the high storage temperature for a long time. | 85°C 240hrs | — |
| Low Temperature storage | Endurance test applying the low storage temperature for a long time. | -40°C 240hrs | — |
| High Temperature Operation | Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time. | 80°C 240hrs | — |
| Low Temperature Operation | Endurance test applying the electric stress under low temperature for a long time. | -40°C 240hrs | — |
| High Temperature/ Humidity Storage | Endurance test applying the high temperature and high humidity storage for a long time. | 60°C, 90%RH 240hrs | — |
| High Temperature/ Humidity Operation | Endurance test applying the high temperature and high humidity Operation for a long time. | 60°C, 90%RH 120hrs | — |
| Temperature Cycle | Endurance test applying the low and high temperature cycle.  | -40°C / 80°C 30 cycles | — |
| Mechanical Test | | | |
| Vibration test | Endurance test applying the vibration during transportation and using. | Frequency: 10~55Hz amplitude: 1.5mm Time: 0.5hrs/axis Test axis: X, Y, Z | — |
| Others | | | |
| Static electricity test | Endurance test applying the electric stress to the finished product housing. | Air Discharge model ±4kv, 10 times | — |

*** Supply voltage for OLED system = Operating voltage at 25°C

Test and measurement conditions

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the functional test at $23\pm 5^{\circ}\text{C}$; $55\pm 15\%$ RH.
2. All-pixels on/off exchange is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle.
4. No Condensation.

Evaluation criteria

1. The function test is OK.
2. No observable defects.
3. Luminance: $> 50\%$ of initial value.
4. Current consumption: within $\pm 50\%$ of initial value.

APPENDIX:

RESIDUE IMAGE

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

10. Inspection specification

Inspection Standard:

MIL-STD-105E table normal inspection single sample level II.

Definition

1 Major defect : The defect that greatly affect the usability of product.

2 Minor defect : The other defects, such as cosmetic defects, etc.

Definition of inspection zone:

Zone A: Active Area

Zone B: Viewing Area except Zone A

Zone C: Outside Viewing Area

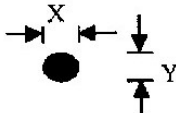

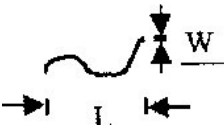

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble of quality and assembly to customer's product.

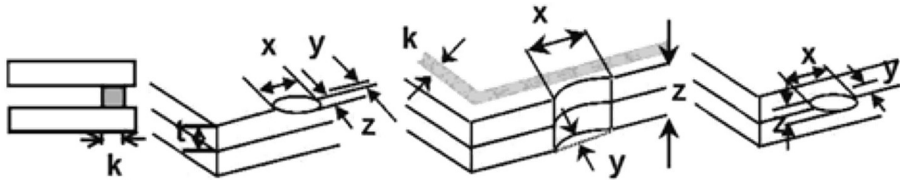

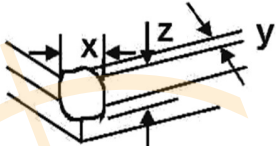

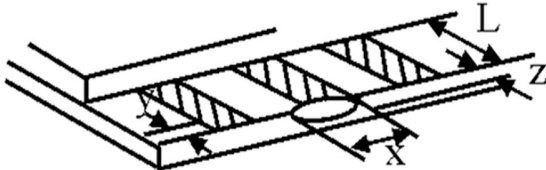

Inspection Methods

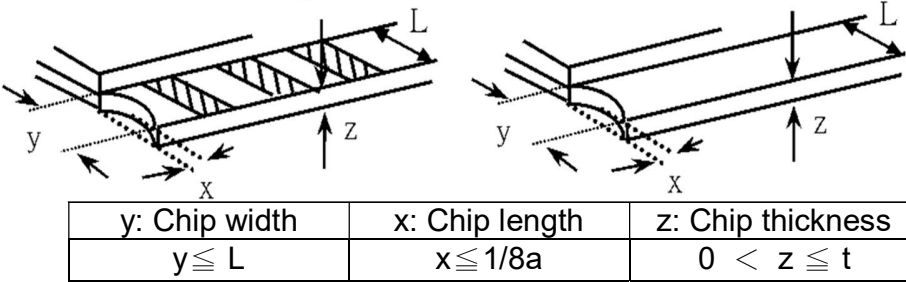

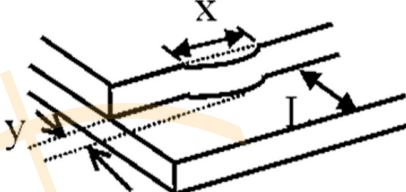

1 The general inspection : Under fluorescent light illumination: 750~1500 Lux, about 30cm viewing distance, within 45° viewing angle, under 25±5°C.

2 The luminance and color coordinate inspection : By SR-3 or BM-7 or the equal equipments, in the dark room, under 25±5°C.

| NO | Item | Criterion | AQL |
|----|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 01 | Electrical Testing | 1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character , dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect. | 0.65 |
| 02 | Black or white spots on OLED (display only) | 2.1 White and black spots on display 0.25mm, no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm. | 2.5 |

11. Precautions in use of OLED Modules

Modules

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, change the components or modify its shape of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Do not apply input signals while the logic power is off.
- (5) Don't operate it above the absolute maximum rating.
- (6) Don't drop, bend or twist OLED display module.
- (7) Soldering: only to the I/O terminals.
- (8) Hot-Bar FPC soldering condition: 280~350C, less than 5 seconds.
- (9) Winstar has the right to change the passive components (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.) and change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Winstar have the right to modify the version.)
- (10) Winstar has the right to upgrade or modify the product function.
- (11) For COG & COF structure OLED products, customers should reserve VCC (VPP) adjustment function or software update function when designing OLED supporting circuit. (The progress of OLED light-emitting materials will increase the conversion efficiency and the brightness. The brightness can be adjusted if necessary).

11.1. Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged. So, be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage by using following adhesion tape.
 - * Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy. Also, pay attention that the following liquid and solvent may spoil the polarizer:
 - * Water
 - * Ketone
 - * Aromatic Solvents
- (6) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (7) Do not touch the following sections whenever possible while handling the OLED display modules.
 - * Pins and electrodes
 - * Pattern layouts such as the TCP & FPC

- (8) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (9) Do not apply stress to the LSI chips and the surrounding molded sections.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
- * Be sure to make human body grounding when handling OLED display modules.
 - * Be sure to ground tools to use or assembly such as soldering irons.
 - * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
 - * Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

11.2. Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps. And, also, place in the temperature $25\pm 5^{\circ}\text{C}$ and Humidity below 65% RH. (We recommend you to store these modules in the packaged state when they were shipped from Winstar. At that time, be careful not to let water drops adhere to the packages or bags.)
- (2) When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments, the electrodes may be corroded if electric current is applied. Please store it in clean environment.

11.3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, OLED display module may be damaged.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD / VCC). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.
- * Connection (contact) to any other potential than the above may lead to rupture of the IC.
- (7) If this OLED driver is exposed to light, malfunctioning may occur and semiconductor elements may change their characteristics.

- (8) The internal status may be changed, if excessive external noise enters into the module. Therefore, it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design.
- (9) We recommend you to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
- (10) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use the same image for long time in real application. When an OLED display module is operated for a long of time with fixed pattern, an afterimage or slight contrast deviation may occur.
- (11) The limitation of FPC and Film bending.

- (12) The module should be fixed balanced into the housing, or the module may be twisted.

- (13) Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

11.4. Precautions when disposing of the OLED display modules

- (1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

Disclaimer

ALL PRODUCTS, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

Texim Europe B.V. its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Texim"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Texim makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product.

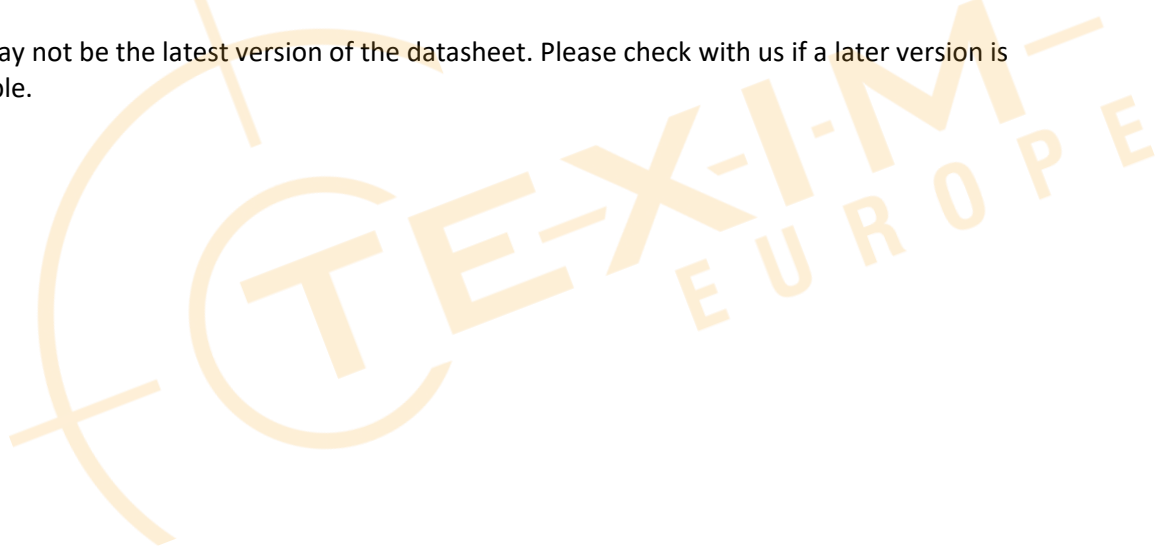

It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application.

Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time.

All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts.

Please contact us if you have any questions about the contents of the datasheet.

This may not be the latest version of the datasheet. Please check with us if a later version is available.
