High performance ± 5 g MEMS accelerometer with digital interface

Superior bias and scale factor repeatability

AXO[®]305 is a single-axis, low noise, closed-loop digital MEMS accelerometer with ± 5 g input range that offers a digital, cost-effective and low-SWaP alternative to quartz accelerometers.

Its superior 1-year composite bias repeatability of 1 mg makes AXO[®]305 a perfect candidate for integration into high performance Inertial Measurement Units (IMU), Inertial Navigation Systems (INS) and Motion Reference Units (MRU) for land, railway, marine and subsea applications.

The hermetic ceramic SMD package combined with a 24 bits SPI interface eases the integration of AXO[®]305 and reduces the BOM. The built-in self-test ensures initial verification of the sensor's integrity and continuous in-operation functionality test.
