Chapter 1: Scope

1.1 Products

The 5.7", 6.5" and 7" projected capacitive touch panels (AMT names it as 'PCI') with COF (Chip on FPC) tails, their part no. are:

- P3010-C20: 5.7" PCI with 1.1mm plain glass on top
- P3010-C10: 5.7" PCI without top glass, this item is only offered to specific partners
- P3011-C20: 6.5" PCI with 1.1mm plain glass on top
- P3011-C10: 6.5" PCI without top glass, this item is only offered to specific partners
- P3012-C2A: 7" PCI with 1.1mm plain glass on top
- P3012-CGA: 7" PCI with 1.1mm black color surrounding printed glass
- P3012-C1A: 7" PCI without top glass, this item is only offered to specific partners

The above touch panels are used the same COF tail, the part no. of this COF tail is PM2201.

1.2 Part no. Definition

The entire part number of this PCI products is presented as 92-P30nn-xyz, code "nn" is the sequence number of AMT standard stock PCI items and the last 3 codes of the part number represent which types of tail / glass / version are used and they are shown as follows:

92 - P 3 0 n n - x y z

x Code	Description
C	Use COF tail

y Code	Description
1	No top glass on the PCI touch
2	Use AMT defined plain glass
G	Use décor glass

z Code	Description
A	Version

For example, if the product part no. is P3012-C2A, the last three codes represent that COF tail, AMT defined plain glass and version A are used in this product.

1.3 Serial no. Identification

The serial no. below is an example from a 7" touch panel. The sticker is on the PCI tail side, it shows the serial no. of this PCI touch panel as the picture below, it contains one letter and 15 digits for projected capacitive touch panels. The example below explains the serial no. representations of AMT's products:

1	2	3	4	5
Part no. P3012	Which types of tail / glass / version are used (refer to section 1.2)	Production Year, 2012	Production Week, week 29	Serial numbers

Chapter 2: Product Specifications

2.1 Mechanical Specification

Touch Panel Mechanical Specification:

Part No.	P3010-C20	P3010-C10	P3011-C20	P3011-C10	P3012-C2A	P3012-CGA	P3012-C1A
Touch Panel Size	5.7"		6.5"		7"		
Total Thickness (mm)	1.50 ± 0.2	0.40 ± 0.1	1.50 ± 0.2	0.40 ± 0.1	1.50 ± 0.2		0.40 ± 0.1
Thickness of Top glass (mm)	1.1	n/a	1.1	n/a	1.1		n/a
Outside Dimension L x W (mm)	136.16 x 110.12	135.16 x 109.12	153.08 x 122.96	152.08 x 121.96	172.60 x 113.44	186.60 x 131.00	171.60 x 112.44
View Area L x W (mm)	123.16 x 94.12		140.08 x 106.96		160.60 x 98.44	154.60 x 92.44	160.60 x 98.44
Active Area L x W (mm)	122.16 x 93.12		139.08 x 105.96		159.60 x 97.44	153.60 x 91.44	159.60 x 97.44
Surface Finish	Clear Type	n/a	Clear Type	n/a	Clear Type		n/a
Haze	7 ±3%						
Light Transmission rate	91 ± 3%						
Construction	GFF	AFF	GFF	AFF	GFF		AFF

Note: n/a: Not Available AFF: OCA-Film-Film GFF: Glass-Film-Film

COF tail Mechanical Specification:

COF Part No.	PenMount 2201 Flexible Control Board
Support Touch Screen Size	For 5" to 7.9" PCI
Touch Controller	PenMount P2-03
Connector pins & pitch & contact side	10 pins, pitch is 0.5 mm, contact side is down side
Mechanical Size L*W (mm)	51.5 * 72.6
Max. support Sensing Lines	15
Max. support Driving Lines	24

2.2 Mechanical Dimension

The followings are the drawings of P3010-C20, P3010-C10, P3011-C20, P3011-C10, P3012-C2A, P3012-CGA, P3012-C1A and COF tail. If you need more detailed drawings or information, please visit our website and choose "support & download", click on the item you need and then download.

2.2.1 Touch Panel Mechanical Drawing and Real Product View

P3010-C20 : 5.7" PCI with 1.1mm top glass

Front View

P3010-C10: 5.7" PCI without top glass

Front View

Unit:mm

Remark: Item P3010-C10 is only available for AMT's selected partners.

P3011-C20 : 6.5" PCI with 1.1mm top glass

Front View

P3011-C10: 6.5" PCI without top glass

Front View

Remark: Item P3011-C10 is only available for AMT's selected partners.

P3012-C2A : 7" PCI with 1.1mm top glass

Front View

Unit:mm

P3012-CGA : 7" PCI with 1.1mm black printed glass

Front View

Unit:mm

P3012-C1A: 7" PCI without top glass

Front View

Unit:mm

Remark: Item P3012-C1A is only available for AMT's selected partners.

2.2.2 COF Tail Mechanical Drawing and Rear/ Front View

Bending radius: R2.5mm

JF1 definition	
Pin	Designation
1	VCC (5V)
2	D-
3	D+
4	GND
5	SCK/RXD
6	SDA/TXD
7	NC
8	NC
9	INTHM
10	VCC (3.3V)

Chapter 3: COF Tail Hardware Specifications

3.1 Interface Specifications

There are 10 pins on PenMount PM2201 COF tail, the terminator is ZIF type, pitch is 0.5mm, contact side is downward, and contact terminator is with gold plate, the pin definition is set as below:

Pin	Designation
1	VCC (5V)
2	D-
3	D+
4	GND
5	SCK/RXD
6	SDA/TXD
7	NC
8	NC
9	INTHM
10	VCC (3.3V)

3.2 COF tail System Block Diagram

3.3 Interface

We provide 10-pin COF tails, you can use USB, UART or I²C to connect this COF tail to your system. The followings are the functions, pin numbers and designations for different interfaces.

3.3.1 USB Interface and Data Communication

USB (Universal Serial Bus) is an industry standard, which is a connection between the computer/ notebook/ laptop and the external devices. It is commonly used in connecting to PC or handheld device. There are 4 pins on COF tail to define USB connection.

Pin no	Designation
1 or 10	VCC (5V or 3.3V)
2	D-
3	D+
4	GND

3.3.2 UART

A UART (Universal Asynchronous Receiver/ Transmitter) is a serial port, it is commonly used in conjunction with communication standards such as RS-232 or others. In COF tail design, PenMount only provide UART interface for connecting to the host. Here is the pin definition for UART interface:

Pin no	Designation
1 or 10	VCC (5V or 3.3V)
4	GND
5	RXD
6	TXD

3.3.3 I²C

The I²C (Inter-IC) bus is a bi-directional two-wire serial bus that provides a communication link between integrated circuits (ICs). Typical voltages used are +5 V or +3.3 V.

The I²C bus has two roles for nodes: master and slave:

- Master node — node that issues the clock and addresses slaves
- Slave node — node that receives the clock line and address.

The bus is a multi-master bus which means any number of master nodes can be present. Additionally, master and slave roles may be changed between messages (after a STOP is sent).

There are four potential modes of operation for a given bus device, although most devices only use a single role and its two modes:

- master transmit — master node is sending data to a slave
- master receive — master node is receiving data from a slave
- slave transmit — slave node is sending data to the master
- slave receive — slave node is receiving data from the master

PenMount I²C interface provide 'INTHM' pin as an optional. Generally, I²C (without INTHM pin) uses polling communication method, master communicates with slave in a period of time. If there is an INTHM pin, slave can "ask" master whether it gets ready or not, so that master no need to keep "asking" slave, thus it becomes more efficient. Here is the pin definition for the I²C interface of our COF tail

Pin no	Designation
1 or 10	VCC (5V or 3.3V)
4	GND
5	SCK
6	SDA
9	INTHM

3.4 Suggested Connectors on System Side for COF tail terminator

Flip-lock type connectors with bottom contact points or side entry type connectors with bottom contact points or double side contact connectors can be used to connect COF tail, details of the suggested side entry bottom contact connector is shown in no. 1:

1. Manufacturer: AMP model no. 1-1734844-0

- 0.50 mm pitch
- 10 pins
- Gold contact plating, mating area, material
- Please refer to its detail specification

Please see the suggested flip-lock type connectors with bottom contact points as below:

2. Manufacturer: Hirose model no. FH52-10S-0.5SH
3. Manufacturer: AMP model no. 1-1734242-0

Chapter 4: PenMount PCI Controller IC Specifications

4.1 General Descriptions

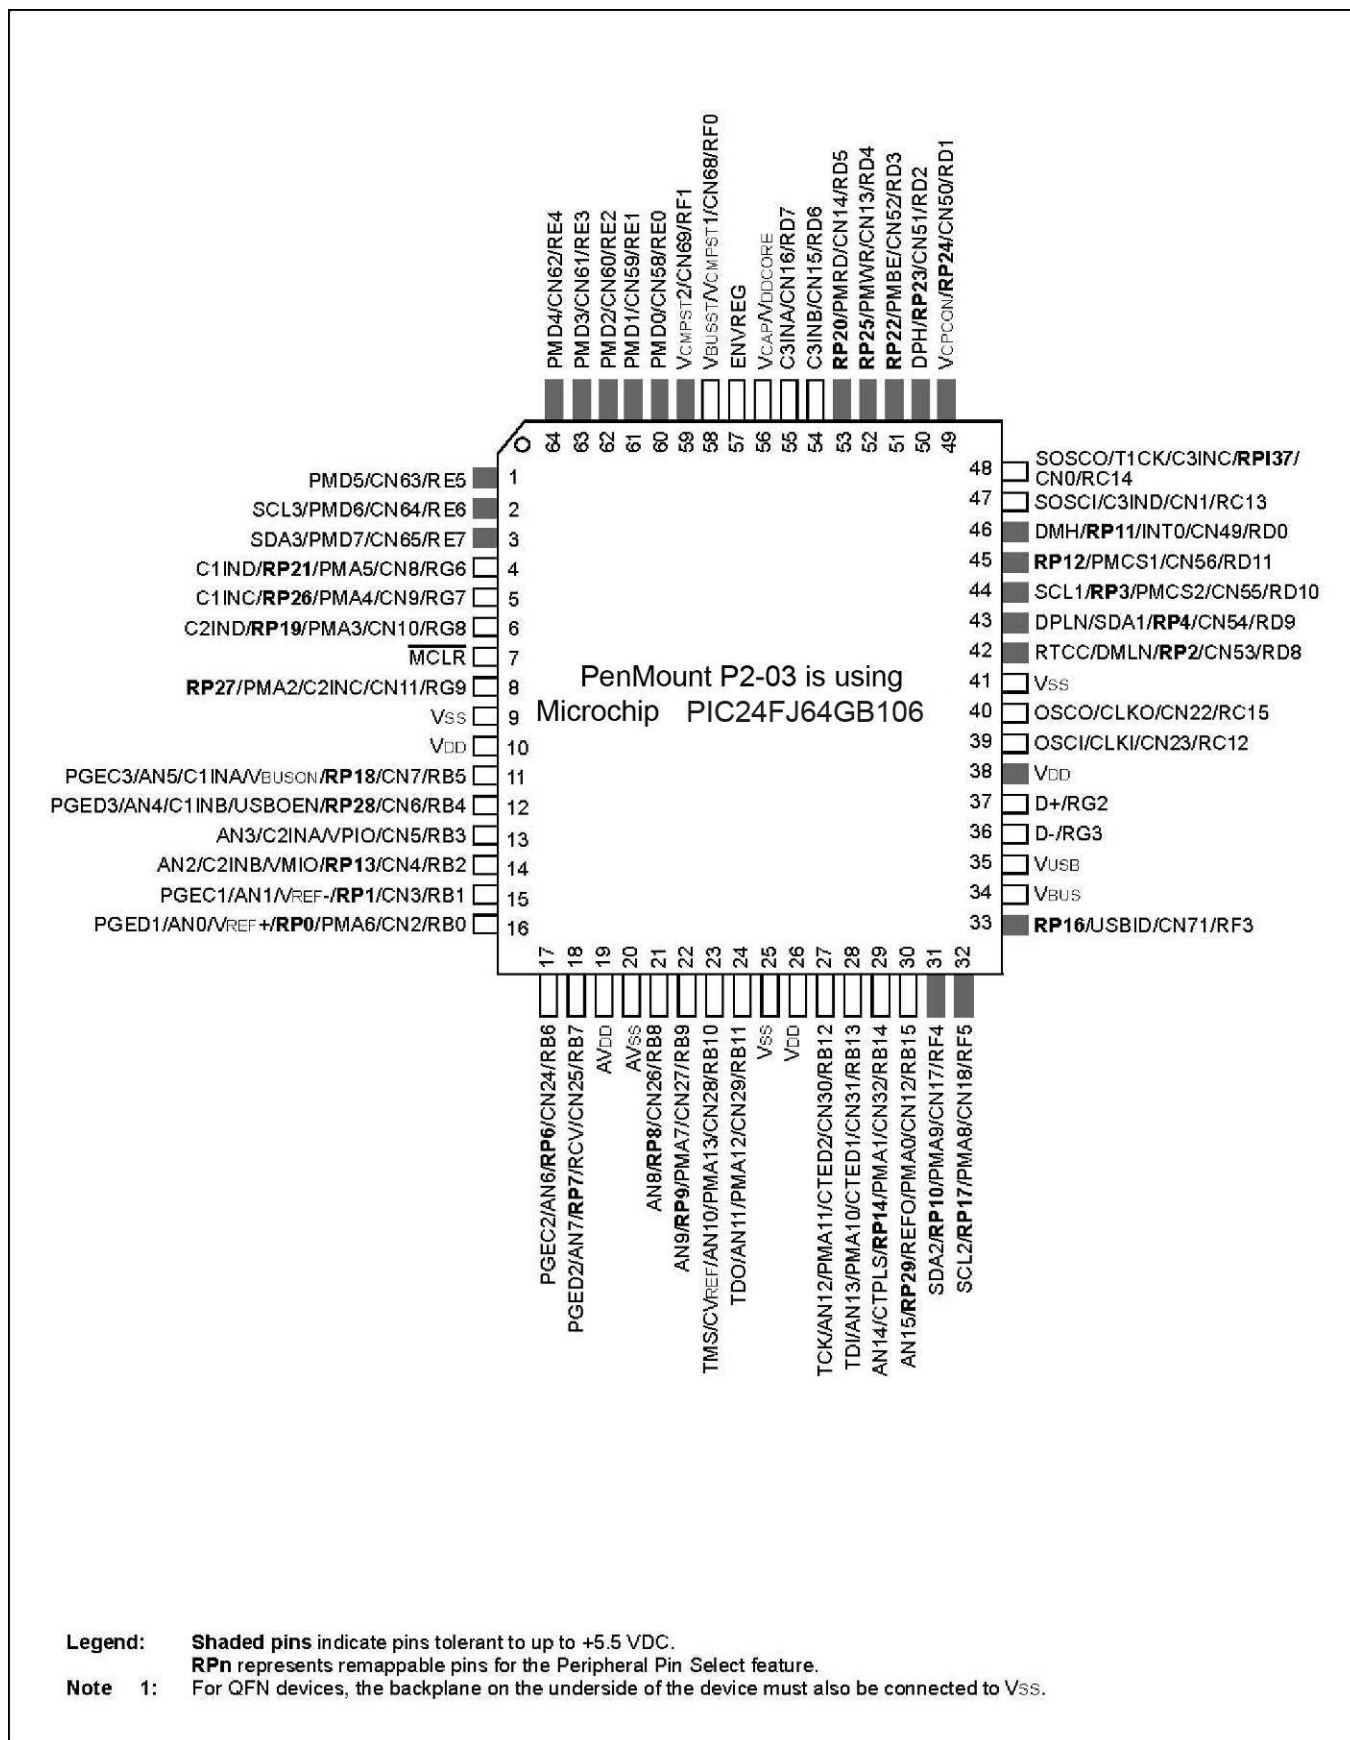

Touch Controller IC	PenMount P2-03
Interface	USB V2.0 and V3.0/ UART / I ² C
ADC resolution	10 bits
Operating Voltage	+3.3V / +5V
Storage Temperature	-40°C ~ +85°C
Operating Temperature	-20°C ~ +70°C
Power Consumption	Typical – Standby Mode: 16 mA / 5V; Active Mode: 28.8 mA / 5V; Sleep Mode: 1.4 mA / 5V;
Sample rate/second	Single Point 130 sps / Two Point 100 sps
Touch media	Finger, gloved hand (please contact us for details)
Firmware	Develop by PenMount team
Operation force	Light
Water resistance	Special algorithm to handle water without false function
Top glass thickness supported	Upto 2.8mm
Driver supports	All popular O.S., like Microsoft Windows and Win CE and various Linux distribution

Note: Sample rate/second are varied based on different version of panel and firmware.
PenMount P2-03 is using Microchip PIC24FJ64GB106 IC.

4.2 Control IC Features

- Charge Time Measurement Unit(CTMU)
- 16 MIPS operation at 32MHz CPU
- 256KB program memory
- 10-bit, up to 16 channel Analog-to-Digital converter
- On-Chip 2.5V Voltage Regulator
- Run mode: 1mA/MIPS, 2.0 Typical
- Sleep mode: Current down to 100nA Typical
- Standby Current with 32 KHz Oscillator: 2.5uA, 2.0V typical
- USB, UART, I²C serial bus
- Other details controller specification, please refer to Microchip PIC24FJ64GB106 datasheet

4.3 Controller IC Pin out and Package Definition

Chapter 5: Software drivers & PenMount Utility

5.1 Available Drivers & Where to Download

Drivers for USB and UART are available in AMT's website, please go to the link below for downloading the drivers you need. However, drivers for I²C are not released in our website, if you are using I²C, please contact our sale representatives or distributors for further information.

<http://www.amtouch.com.tw/support-downloads/penmount-drivers-and-utilities/pci-touch-controller/1000-series-linux-and-other-drivers/>

The table below shows which interfaces and drivers are available today. Please note that if you use USB interface and Windows Vista/7, the default driver is available inside the OS, so you no need to download and install an additional driver. For RS-232(UART) interface and Windows Vista/7/8 platform users, you need to download and install the drivers from our website. The drivers will be modified and updated from time to time, the most updated drivers are available in AMT and PenMount website. Drivers' versions are subject to change without notice.

OS \ Interfaces		USB	UART	I ² C
Windows	Windows CE 6.0/ 7.0	•	•	Please contact us for further information.
	Windows XP	•	•	
	Window Vista/ 7/8	•	•

5.2 PCIMSet Introduction

PCIMSet is a utility software developed by PenMount for users to adjust the touch screen's accuracy, sensitivity... and others features. When you have AMT PCI touch kits, we provide you this utility program, so you can choose the appropriate interface through PCIMSet setting. If you need more detailed information, please see chapter 3 "PenMount PCIMSet" of PenMount Projected Capacitive Input (PCI) User Guide.

5.3 Firmware Update

5.3.1 Firmware Interface

We provide USB, UART and I²C interface in firmware, the shipping default is set at USB interface, and you can change the interface to UART or I²C by PCIMset utility if the USB interface is not required by your system. The interface changing method is in our PenMount Projected Capacitive Input (PCI) User Guide. There will be new firmware to be updated, details are all described in our User's Guide, please read it carefully before making the firmware update.

5.3.2 New Firmware Request

The latest PenMount controller firmware version is programmed inside the chip. PenMount controller firmware is able to be renewed in customer side, PenMount will release the new firmware with new features or modification, the new updated firmware is available in AMT or PenMount customer services team. As the new updated firmware is sent by request, if you need to update the new firmware, please follow the updated firmware request procedures as below:

- a. First, please fill in the 'PenMount PCI Firmware Update Request' (FUR) form. The FUR form is sent by request, so please contact our sale representatives, customer services team or distributors in your region for requesting the FUR form.
- b. Sent back the FUR form to AMT or PenMount sale representatives, customer services team or distributors in your region.
- c. After checking and confirmed by AMT or PenMount team, we will send the updated firmware for customers to do on field update.

5.3.3 Firmware download and update

The PenMount field update utility (Pmfu) is developed for users to update the latest firmware version. Please note that only our standard firmware offers a free update service, if it is a special developed firmware in accordance with the requests of the client, or any adjustment has been made for the firmware due to the requests of the client, these are regarded as a special firmware, and they won't have a free firmware update. The firmware update will be provided once we have a new firmware ready. If you need any further information about this, please contact our sale representatives or distributors in your region. And if you want to get more information about the operation steps of PenMount Pmfu, you can read chapter 4.1 & 4.2 of the PenMount Projected Capacitive Input (PCI) User Guide.

Chapter 6: Product Test

The following test has been done by AMT Projected Capacitive Touch and PenMount controller or Control board.

6.1 Operating Test

PCI Touch panels were tested under the temperatures range at -20°C and $+70^{\circ}\text{C}$, the PCI touch panels can operate normally under the above temperature.

6.2 Environmental Test

PCI touch panels were tested under the temperature:

- -40°C for 288H,
- 60°C with 90RH for 288H,
- 80°C for 288H,
- $-40^{\circ}\text{C} \sim +80^{\circ}\text{C}$ for 20 cycles.

Touch panels can operate normally after the test, please see PCI approval sheet for details.

6.3 ESD

PCI touch solution can withstand 15KV air discharge and 8KV contact discharge. However, the PCI touch has to be integrated properly with good grounding.

6.4 Linearity Test

This test is to calculate the difference between the actual touch position and the expected touch position, which

$$\frac{\Delta X}{X}\% < 2.0\% \quad \text{and} \quad \frac{\Delta Y}{Y}\% < 2.0\%$$

6.5 Optical Inspection

AMT PCI has its optical specification, please refer to AMT PCI optical specification A003-1 and A003-2.

6.6 Others

For other test, please contact to our sale representatives or distributors for detailed information.

Chapter 7: Warranty

We provide one year limited liability warranty. We shall not be held responsible for any damage, destroy or defect caused by accident, misinstallation, misunderstanding of the instructions, customer modification, misuse of software or their use in a defective or deficient environment or any misuse during their operation of the touch panels.

Chapter 8: Other Documents

The following documents can be provided to our clients for guiding our customers how to install and operate our products:

- AMT PCI Integration Guide—AMT PCI Integration guide is the guide that to instruct you how to install the touch panel into your products, and what you should aware of.
- AMT PCI Design Guide—AMT PCI Design Guide describes the general design rules and requirements for AMT projective capacitive input (PCI) touch panels, such as their structure, size, pattern and lines.
- PCI PenMount 1000 Device Driver Development Guide— it provides necessary information about the protocols for PenMount and guide you to operate the USB, RS-232(UART) and I²C protocols of PenMount 1000.
- PenMount Projected Capacitive Input (PCI) User Guide— it contains detailed information of our touch Screen kits, such as what software you need, how to install drivers, what is PenMount PCIMSet and firmware update instructions and etc. You can go to the link below to download the manual/ PenMount Projected Capacitive Input (PCI) User Guide.

<http://www.amtouch.com.tw/support-downloads/manuals-downloads/>

Note: AMT PCI Integration Guide, AMT PCI Design Guide and PCI PenMount 1000 Device Driver Development Guide are sent by request, so please contact our sale representatives or distributors in your region for request if you need these guides. Document versions are subject to change without notice.
